

DH Technology partners with Ergotron

DH Technology recently signed a distribution agreement with Ergotron, a leading vendor of mounting solutions for displays, notebooks and tablet PCs. Ergotron has been in business for 25 years, and its founder was part of the team responsible for the VESA mounting standards that have become universally accepted by the IT and display industry.

Ergotron is a great innovator in this field. It holds many international patents, and invented Constant Force (CF™) technology that is found on many of its products. CF™ allows a user to instantly adjust and lock height movement on screens up to 60kg, using a force of less than 2kg. These and many other innovations have positioned Ergotron as the product of choice in thousands of corporations worldwide.

As well as having applications in DH's traditional markets of retail, hospitality and auto-ID, Ergotron is a powerful offering in our emerging markets of healthcare, government and large enterprise. The Ergotron range includes mounting solutions for desktop displays, wall-mounted large format screens, PC and notebook mounting solutions, and mobile carts for hospital use. In fact, just about any business is a candidate for an Ergotron mounting solution.

For more information on the Ergotron range, please consult our website or call your DH sales representative.

StyleView® LCD Cart

LX Dual Desk Mount Arm

VL Vertical Lift Wall Mount

The Ergotron Product Range

Desk Mounts: mounting solutions for 1, 2, 3 or even 4 monitors physically joined together. Mounts can lift and pivot, and can be attached by clamp or drill-through grommet. Many mounts use Ergotron's patented CF™ technology, allowing the user to easily position and lock the screen in the perfect location to suit the ergonomics of the user.

Wall Mounts: cover two areas — large/medium TVs and displays, and complete workstations for confined areas. The workstations fold away to provide additional floor space when not in use, and are height- and pivot- adjustable.

Carts: The LX large display cart is a unique solution for large format LCD and plasma screens, providing portability and height/pivot flexibility in boardrooms, classrooms, offices and conference centres. The StyleView® carts are purpose-built for healthcare professionals in the hospital environment, and come in powered and non-powered versions.
